

# SERIES 963UV-SF

## Technical Data Sheet

## UV Screen Printing Ink

### 1. APPLICATION FIELDS:

Universal low-viscous, **silicone-free** UV screen printing ink for printing on plastic film, especially in rotary screen printing, applicable for:

- Polyolefins like Polyethylene (PE), Polypropylene (PP)
- TC Polyethylene (PE)
- TC Polypropylene (PP)
- TC Polyester
- PVC and other plastic films
- Coated paper and cardboard

Substrates may differ in their chemical structure or method of manufacture.

A test for suitability must always be carried out before printing. Antistatic, Mould Release Agents and Slip Additives may have negative effects on adhesion and should be detected and removed prior to printing.

### 2. CHARACTERISTICS:

The inks of series 963UV-SF show the following features:

- Free from ITX, benzophenone and 4-methylbenzophenone (4-MBP) as well as formulated free from Bisphenol A
- **Silicone-free**, barium-free and low-odour
- Very reactive even at high machine speeds of up to 65 m/min
- Low viscosity, for universal use on a wide range of substrates
- Very good flow characteristics
- High opacity and colour brilliance by optimal pigment wetting and ideal basic colour shades composition
- Good solvent and water resistance
- Excellent filling resistance after 48 hours
- The inks series is suited especially for combination printing with UV flexo printing inks

### 3. RANGE OF COLOURS:

The basic ink mixing system consists of 11 basic colours and may be used for the mixing of a wide colour shade range. Field proven mixing formulations exist for Pantone®, HKS, RAL, NCS, etc.

#### 3.1 Basic Colours:

Yellow	M01	963UV20195SF
Yellow	M02	963UV20196SF
Orange	M03	963UV31582SF
Red	M05	963UV31583SF
Pink	M06	963UV31584SF

Violet	M07	963UV51655SF
Blue	M08	963UV51656SF
Green	M09	963UV60722SF
White	M11	963UV1482SF
Black	M12	963UV9375SF
Varnish	M 0	963UV0349SF

#### 3.2. High opaque products:

Opaque white	963UV1481SF
--------------	-------------

#### 3.3 Combination with other ink systems:

##### UV Flexo printing inks:

##### **Series UVFX**

Low viscosity, silicone-free, high opaque, hot stamping  
High colour brilliance through optimized pigment composition.

##### UV Screen printing lacquers:

##### **960UV451 Tactile lacquer**

Silicone-free, low tactile 50 – 100µm, transparent, flexible, gluing, hot stamping.

##### **960UV362 Flexo lacquer, gloss**

Silicone-free, low viscosity, very reactive, transparent, flexible, gluing, hot stamping.

##### **960UV417 Flexo lacquer, matt**

Silicone-free, low viscosity, flexible, gluing, hot stamping.

### 4. ADDITIVES:

#### 4.1 UV Thinner:

The inks of the 963UV-SF series are ready to use.

If further viscosity reduction is desired, UV thinner may be added. In order to increase curing, the addition of reactive thinner is recommended.

UV Thinner	(max. addition 2-5 %)	963UV0014SF
------------	-----------------------	-------------

In general, no solvent-based thinners should be used due to flammable nature of the solvents and equipment harm.

#### 4.2 Curing Promoter:

To reach a higher reactivity we recommend using our curing promoter.

Curing promoter	(max. addition 2%)	HB2
-----------------	--------------------	-----

# SERIES 963UV-SF

## 4.3 Leveling Agent:

The leveling of the surface can be optimized by using leveling agent.

Leveling agent (addition 1 – 2%) 900UV-VM

## 4.4 Adhesion Modifier:

In the case of particularly high resistance requirements the addition of adhesion modifier is recommended. However the addition of adhesion modifier to UV curable ink will lead to a processing time (potlife) of 8 hours at 21°C depending on the colour shade. Higher processing temperatures will result in a shorter potlife.

Overprinting must take place within 12 hours at 21°C in case an adhesion modifier is added.

Adhesion Modifier (max. addition 2-4 %) 1000VR1259

## 5. PROCESS INSTRUCTIONS:

### 5.1 Pre-treatment:

Pre-treatment of polyolefins (PE/PP) must be performed by CORONA-discharge in order to insure the adhesion of the UV screen printing ink to the substrate. In case of PE, surface tension needs to be at least 42 mN/m (Dynes/cm), in case of PP at least 48 mN/m (Dynes/cm).

### 5.2 Stencils / Printing Equipment:

Suitable mesh types are: RotaMesh® RM 305/17%, RM 305/13% or mesh type RotaPlate® 305 S and Screeny® KM and KS or S-Line® RSS which are used on rotary screen printing machines.

Any acrylic acid ester resistant squeegee material may be used.

### 5.3 Curing conditions:

The ink series **963UV-SF** can be cured by the use of medium pressure mercury vapour lamps at least 120 W/cm.

The optimum energy output is 120 - 140 Millijoule/cm<sup>2</sup>, measured by UVScale measuring system from Fujifilm.

UV curing is followed by a 48 hour post-cure phase after which the ink film is fully cured and has its final properties. However, it must be noted, that low radiation intensity, excessive machine speeds or excessive film thickness can have a negative influence on the curing properties and adhesion.

Un-cured prints are considered a hazardous waste. Therefore, it is recommended to cure misprints under the UV lamp as a matter of principle.

After curing, spoilage can be disposed by conventional methods and may be incinerated without causing any difficulties.

## 5.4 Preparation for printing with silicone-free inks:

When printing with silicone free inks, we must take into consideration that equipment like pumps, syringes, containers, squeegees and screens have to be silicone free.

Therefore they have to be cleaned with alcohol for example isopropanol.

Screens from washers / automated screen cleaning equipment must be cleaned by hand prior to using to insure, that no silicone contamination / residue is left remaining on the screen.

***Before printing, we recommend to stir the ink!***

## 6. CLEANING:

Screens and squeegees as well as other operating materials can be cleaned with the RUCO screen cleaner 34622.

The cleaning has to be done carefully and separate from the cleaning of silicon added inks. Any contamination by silicone has to be carefully avoided.

If cleaning is not performed by fully automatic cleaning equipment, protective gloves must be worn. Cleaning liquids that are contaminated with UV products should not be used for the washing of working materials that were used with conventional screen printing inks.

Solvents that contain UV residue are not suitable for reclamation and must be treated as a separate waste.

Universal Cleaner 34622  
Cleaning agent for cleaning equipment 100VR1442

## 7. SHELF LIFE:

A shelf life of 12 months is guaranteed when storing the inks at 21°C and in the original packing container. At higher storage temperatures the shelf life will be reduced.

## 8. PRECAUTIONS:

UV inks may cause irritations and can increase the sensitivity of the skin, possibly leading to hypersensitivity. Therefore, the use of disposable gloves and protective goggles is strongly recommended.

For further information on the safety, storage and environmental aspects concerning these products, please refer to the Material Safety Data Sheet (MSDS).
